

Our Approach

Leading-Edge Training Materials

We are committed to providing relevant and easy-to-understand training and materials.

Our training courses are coordinated with our books and reference materials, which represent the latest thinking on the subjects.

We combine theoretical and mathematical rigor with practical examples and approaches culled from many years of experience.

We consult with clients worldwide to use GD&T and tolerance analysis effectively, define their products and processes optimally, and help them implement 3D model-based definition in a model-based enterprise.

Our goal is to help you and your staff compete in the competitive global economy. We want you to understand the problems you face and to provide useful tools to help you solve these problems optimally.
